

Legal Case Management & Register System

Software Requirements Specification
User Stories, Functional Requirements & Acceptance Criteria

What this document is. This is a restructured, engineering-ready specification derived from the draft “*User Story & Functional Requirements*” workbook supplied by the Legal Services Department. The source content has been de-duplicated, normalised into modules, given stable requirement identifiers, and made explicit — data types, enumerations, state transitions and acceptance criteria are stated in full rather than implied. Nothing from the source has been discarded; Appendix B traces every source item to its requirement ID.

What needs sign-off. The source document’s *Acceptance Criteria* column was empty throughout. All acceptance criteria in this document were authored during restructuring and require business confirmation. Every inferred item is flagged as an `ASSUMPTION` or `OPEN QUESTION` and listed in Section 12.

DOCUMENT TITLE	Legal Case Management & Register System — Software Requirements Specification
VERSION	1.0 (restructured draft)
STATUS	For review — business sign-off required before development
SOURCE DOCUMENT	User_Story___Functional_Requirements__D_.docx
OWNING DEPARTMENT	Legal Services Department (LSD), SINPF
REFERRING DEPARTMENT	Enforcement & Monitoring Services (EMS) / Inspectorate
SCOPE	Five modules: Referral Register, Contracts, Insurance, Legal Opinions, Title Register
REQUIREMENT COUNT	13 cross-cutting · 23 Module 1 · 25 Modules 2–5 · 6 reports
INTENDED AUDIENCE	Software engineers, solution architects, QA, LSD business owners
DATE PREPARED	12 August 2026

Contents

1. How to read this document	3

6.6 Alerts	25
6.7 Reports	26
7. Module 2 — Contracts Register	28
8. Module 3 — Medical & Property Insurance Register	31
9. Module 4 — Legal Opinions Registry	33
10. Module 5 — Title Register	35
11. Non-functional requirements	38
12. Assumptions and open questions	39
Appendix A — De-duplication and consolidation log	41
Appendix B — Source traceability matrix	44

1. How to read this document

The source document expressed requirements as three parallel columns of free prose. This version separates *why* (user story), *what* (functional requirement), *the shape of the data* (data model), and *how it will be verified* (acceptance criteria), so that each can be implemented and tested independently.

1.1 Identifier scheme

Every requirement carries a stable identifier. Identifiers must not be renumbered when requirements are added; new items take the next free number in their series.

PREFIX	MEANING	EXAMPLE AND READING
US-M1-01	User story	Module 1, story 01 — states the business need and the actor.
FR-M1-001	Functional requirement	Module 1, requirement 001 — a single testable system behaviour.
AC-M1-001.1	Acceptance criterion	First criterion verifying FR-M1-001.
BR-M1-01	Business rule	A constraint that applies across several requirements.
CC-D0C-01	Cross-cutting requirement	Applies to all five modules; stated once in Section 5, referenced elsewhere.
RPT-M1-01	Report definition	A named report with fixed columns, filters and grouping.
ALT-M1-01	Alert definition	A trigger, recipient, timing and channel.
A-01	Assumption	Not stated in the source; inferred to make the requirement implementable. Requires confirmation.
Q-01	Open question	A decision the business must make before the affected requirement can be built.

1.2 Requirement keywords and priority

KEYWORD	MEANING
MUST	The requirement is explicit in the source document and is mandatory for first release.
SHOULD	Strongly implied by the source, or required for a MUST requirement to be usable. Mandatory unless the business explicitly de-scopes it.
PROPOSED	Not present in the source. Added by the analyst because an explicit requirement cannot function without it. Must be approved or rejected before build.

Each requirement block shows its priority as a badge on the right of the header bar.

1.3 Data dictionary conventions

TYPE	DEFINITION AND STORAGE GUIDANCE
UUID	System-generated primary key. Never displayed to users as the primary reference; each record also has a human-readable reference number.
String(n)	Unicode text, maximum <code>n</code> characters, trimmed of leading and trailing whitespace on save.
Text	Unbounded multi-line text.
Date	Calendar date, no time component. Displayed as <code>DD/MM/YYYY</code> ; stored as ISO 8601 <code>YYYY-MM-DD</code> .
DateTime	Timestamp stored in UTC, displayed in Pacific/Guadalcanal (UTC+11).
Money	<code>Decimal(15,2)</code> . Currency is Solomon Islands Dollar (SBD) unless a currency field is present. Never stored as a floating-point type.
Enum	A closed set of values defined in this document. Values are stored as stable codes; display labels may change without a data migration.
FK →	Foreign key reference to the named entity.
File[]	Zero or more attachments handled by CC-DOC-01.
Bool	True/false. Must not be nullable; specify a default.

GLOBAL DATA RULE — BR-GL-01

No record is ever hard-deleted. Deletion is a soft-delete: the record is marked inactive, retains its audit history, and is excluded from default list views and reports. Only the System Administrator role may view soft-deleted records.

GLOBAL DATA RULE — BR-GL-02

Every entity in this specification carries the same six audit columns, which are not repeated in the individual data model tables: `created_by` , `created_at` , `updated_by` , `updated_at` , `is_deleted` , `deleted_at` .

2. Glossary

The source document uses abbreviations and domain terms without definition. Engineers should treat the definitions below as authoritative for naming classes, tables and API resources.

TERM	DEFINITION
SINPF	Solomon Islands National Provident Fund — the statutory body that owns the system.
LSD	Legal Services Department — the primary user of the system.
EMS	Enforcement & Monitoring Services, operating under the Inspectorate function. EMS performs compliance monitoring of employers and refers non-compliant employers to LSD.
MLS	Manager Legal Services — the head of LSD; a recipient of periodic reports and (assumed) the approver for case closure and withdrawal.
GM	General Manager — a recipient of periodic reports.
ARMC	Audit & Risk Management Committee — a recipient of periodic reports.
Referral	A case formally handed from EMS to LSD for legal action. It is the central record of Module 1.
Contribution	The employer/member contribution payable to SINPF under the SINPF Act. “Unpaid contribution” is one referral case type.
Surcharge	The statutory penalty applied to late or unpaid contributions. Tracked as a claim amount separate from contribution.
Wages Record	The employer’s wage/payroll schedule that SINPF requires in order to compute contributions. Failure to submit it is a referral case type in its own right, distinct from non-payment.
Deed of Settlement	A signed agreement in which an employer commits to settle the claim, usually by instalments. Reached during the settlement stage of the lifecycle.
Statute barred	A claim that can no longer be pursued because the statutory limitation period has expired. One of the high-risk employer conditions named in the source.
Encumbrance	A registered third-party interest over a land title — lease, mortgage, caveat or easement.
Perpetual Estate / Fixed-Term Estate	The two registered land tenure types under Solomon Islands land law; the expected values of the title ownership-type field.
Magistrate Court / High Court	The two court venues named in the source for prosecution or civil filing. The venue determines which court-related fields and deadlines apply.

3. System scope and module map

The source document describes two separate requirement tables. The first covers the referral workload; the second covers four registers. This specification treats them as five modules sharing one platform, one user directory, one document store and one audit trail.

MODULE	NAME	CORE RECORD	SOURCE
M1	Contribution, Surcharge & Wages Referral Register	Referral — a case received from EMS and worked through to closure by LSD.	Table 1
M2	Contracts Register	Contract — an agreement to which SINPF is a party, tracked across its lifecycle.	Table 2, row 1
M3	Medical & Property Insurance Register	Insurance Policy — coverage held by SINPF, tracked to expiry.	Table 2, row 2
M4	Legal Opinions Registry	Legal Opinion — advice issued by LSD to a requesting department.	Table 2, row 3
M5	Title Register	Title — a land or property title held by SINPF, with its encumbrances.	Table 2, row 4

SCOPE BOUNDARY — STATED EXPLICITLY

Module 1 covers the referral *after* EMS hands it over. Compliance monitoring, inspection and the detection of non-compliance remain in the EMS system and are **out of scope**. The source is explicit on this point: the nature of the work changes at the moment of referral.

Whether referrals arrive by system-to-system integration or by manual data entry is **not stated** in the source and is raised as Q-01. This specification assumes manual entry for release 1 (A-01), which is the lower-risk assumption: an integration can be added later without changing the data model.

4. Actors, roles and permissions

The source names people and bodies who interact with the process but does not define system roles. The role set below is derived from the named parties and is the minimum needed to satisfy the stated requirements. It requires confirmation (Q-02).

ROLE	RESPONSIBILITIES IN THE SYSTEM	BASIS
Legal Officer	Works assigned referrals: updates status, uploads evidence, records payments and court details, drafts and records notices. Creates and maintains records in Modules 2–5.	Named in source (“assignment of referral to a Legal Officer”).
Manager Legal Services (MLS)	Assigns and reassigns referrals, approves closure, withdrawal and “not filed” outcomes, views all cases and all reports, monitors workload balance.	Named as report recipient; approval authority is assumed (A-02).

Legal Registry Clerk	Creates referral records from EMS referral letters, uploads documents, maintains register entries. Cannot change case status or close cases.	Proposed (A-03) — required if data entry is separated from legal work.
Executive / Board viewer	Read-only access to reports and dashboards only. No access to individual case documents.	Source: Executive and Board require reporting data.
External Auditor	Time-boxed, read-only access to records, documents and the audit trail for a defined date range. Access automatically expires.	Source: “Provide Information to External Auditors as and when requested.”
System Administrator	Manages users, roles, reference data (case types, document types, alert thresholds), and views soft-deleted records. Cannot alter the audit trail.	Proposed (A-04) — required to operate the configurable values in this specification.

ASSUMPTION A-05 — VISIBILITY DEFAULT

A Legal Officer can view all referrals but may only edit those assigned to them. The alternative — officers see only their own cases — would prevent hand-over during leave and is not implied by the source. Confirm before build.

5. Cross-cutting requirements (all modules)

In the source document, document upload, search, and periodic reporting were restated separately inside every module — five times for document storage, five times for search, and six times for the reporting period list. They are specified once here. Module sections reference these identifiers rather than repeating them.

5.1 Document and evidence storage

CC-DOC-01 Attach documents to any register record

MUST

The system **MUST** allow a user to upload one or more files against any record in Modules 1–5, and to retrieve them from that record. Each attachment **MUST** carry: file name, document type ([CC-DOC-02](#)), document date, uploaded-by user, upload timestamp, file size, and an optional free-text description.

ACCEPTANCE CRITERIA

1. [AC-CC-DOC-01.1](#) — Given a referral record and a PDF under the size limit, when the user uploads it with a document type selected, then the file appears in the record's document list with uploader and timestamp recorded, and is downloadable by any user who can view the record.
2. [AC-CC-DOC-01.2](#) — Given an upload with no document type selected, when the user submits, then the system rejects the upload and identifies the missing field.
3. [AC-CC-DOC-01.3](#) — Given an uploaded file, when any user attempts to overwrite it, then the system refuses and offers to upload a new version instead ([CC-DOC-04](#)).

CC-DOC-02 Document type classification

MUST

Every attachment **MUST** be classified by document type. Types are configurable reference data, scoped to the module. The initial values, taken directly from the source, are:

MODULE	DOCUMENT TYPES
M1	EMS Referral Letter · Contribution Statement · Compliance Note · Employer Correspondence · Legal Notice (issued) · Legal Draft · Deed of Settlement · Court Document · Payment Evidence · Wages Record · Other
M2	Signed Contract · Draft Contract · Variation / Addendum · Termination Notice · Other
M3	Insurance Policy Document · Policy Schedule · Renewal Notice · Claim Correspondence · Other
M4	Signed Legal Opinion · Draft Opinion · Request for Opinion · Supporting Reference · Other
M5	Title Document · Survey Plan · Encumbrance Instrument · Valuation · Other

ACCEPTANCE CRITERIA

1. [AC-CC-DOC-02.1](#) — Given a Module 1 record, when the user opens the document type list, then only Module 1 types are offered.
2. [AC-CC-DOC-02.2](#) — Given a System Administrator, when they add a new document type to a module, then it becomes selectable immediately without a code release.

CC-DOC-03 Accepted formats, size limit and malware scanning**SHOULD**

The system **SHOULD** accept **PDF** , **DOCX** , **DOC** , **XLSX** , **JPG** and **PNG** . Maximum file size is 25 MB per file, configurable. Executable and script file types **MUST** be rejected. Every upload **MUST** be malware-scanned before it is stored and made retrievable.

ACCEPTANCE CRITERIA

1. **AC-CC-DOC-03.1** — Given a file of a disallowed type, when the user uploads it, then the system rejects it and states which formats are accepted.
2. **AC-CC-DOC-03.2** — Given a file that fails the malware scan, when scanning completes, then the file is quarantined, is not retrievable, and the uploader and System Administrator are notified.

CC-DOC-04 Immutable originals with versioning**SHOULD**

Uploaded files **MUST** be immutable once stored. Replacing a document creates a new version; earlier versions remain retrievable and are marked superseded. This satisfies the source requirement for a legally defensible documentation trail that will withstand scrutiny in court.

ACCEPTANCE CRITERIA

1. **AC-CC-DOC-04.1** — Given a document with two versions, when a user views the record, then version 2 is shown by default and version 1 is retrievable and labelled superseded, with both upload timestamps visible.
2. **AC-CC-DOC-04.2** — Given any user of any role, when they attempt to delete a stored file, then the file is not removed from storage; it is marked withdrawn, with the acting user and reason recorded.

5.2 Search and filtering

CC-SRCH-01 Register search and filtering**MUST**

Each module **MUST** provide a list view supporting keyword search, field filters, sorting on any displayed column, and pagination. Filters combine with AND logic; multiple values within one filter combine with OR. Active filters **MUST** be visible and individually removable. The searchable fields per module are defined in each module section.

ACCEPTANCE CRITERIA

1. **AC-CC-SRCH-01.1** — Given a register with records, when the user enters a partial keyword, then all records whose searchable fields contain that string, case-insensitively, are returned.
2. **AC-CC-SRCH-01.2** — Given two filters applied, when results render, then only records satisfying both are shown and the result count is displayed.
3. **AC-CC-SRCH-01.3** — Given a filtered list, when the user exports it, then the export contains exactly the filtered set, in the displayed sort order.

5.3 Audit trail

CC-AUD-01 Append-only audit trail

MUST

The system **MUST** record every create, update, status change, assignment, document upload, document withdrawal, export and permission change. Each entry records: actor, UTC timestamp, entity and record reference, field changed, previous value, new value, and where applicable the reason text. The audit trail is append-only; no role, including System Administrator, may edit or delete entries.

ACCEPTANCE CRITERIA

1. **AC-CC-AUD-01.1** — Given a referral whose status changes, when an authorised user views the case history, then an entry shows who changed it, when, from which status, to which status, and the reason if one was required.
2. **AC-CC-AUD-01.2** — Given a System Administrator, when they attempt to modify or remove an audit entry through any interface, then the action is refused and the attempt is itself recorded.
3. **AC-CC-AUD-01.3** — Given an external audit request, when an authorised user exports the audit trail for a date range, then the export includes all entries in that range in chronological order.

5.4 Access control

CC-SEC-01 Role-based access control

MUST

Access **MUST** be enforced by role (Section 4) on every operation, at the server, not only in the user interface. A user may hold more than one role; the effective permission is the union of their roles.

ACCEPTANCE CRITERIA

1. **AC-CC-SEC-01.1** — Given a user with the Executive/Board viewer role, when they request a case document by direct URL, then access is denied and the attempt is logged.
2. **AC-CC-SEC-01.2** — Given an External Auditor whose access window has expired, when they attempt to sign in, then access is refused without administrator intervention.

5.5 Reporting periods and export

DE-DUPLICATION NOTE

The source repeats the phrase “monthly / quarterly / biannually and annually” against six separate reports. It is specified once here as a shared period selector. Individual report definitions in Section 6.7 state only their columns, filters and grouping.

CC-RPT-01 Standard reporting period selector**MUST**

Every report **MUST** offer the same period selector with these options: **MONTHLY** **QUARTERLY** **BIANNUAL** **ANNUAL** **CUSTOM_RANGE**. Periods are aligned to the SINPF financial year (**Q-03** — the financial year start month must be confirmed; the calendar year is assumed until then, **A-06**). Reports **MUST** also offer a comparison against the immediately preceding period of the same length.

ACCEPTANCE CRITERIA

1. **AC-CC-RPT-01.1** — Given any report, when the user selects Quarterly and a quarter, then only records whose governing date falls within that quarter are included, and the period is printed in the report header.
2. **AC-CC-RPT-01.2** — Given a report with comparison enabled, when it renders, then each measure shows the current period value, the prior period value, and the variance.
3. **AC-CC-RPT-01.3** — Given the same report, period and filters run twice, when compared, then the figures are identical, because each report defines a single governing date field.

CC-RPT-02 Report export**MUST**

Every report **MUST** be exportable to **PDF** (for circulation to MLS, GM and ARMC) and **XLSX** (for analysis). Exports **MUST** carry the report name, period, filters applied, generating user, generation timestamp, and page numbering.

ACCEPTANCE CRITERIA

1. **AC-CC-RPT-02.1** — Given a report on screen, when the user exports to PDF, then the exported figures match the screen exactly and the header carries period, filters and timestamp.
2. **AC-CC-RPT-02.2** — Given an XLSX export, when opened, then amounts are numeric cells, not text, and dates are date cells.

5.6 Notifications and alerts

CC-NOT-01 Alert delivery and dashboard**MUST**

All alerts defined in this specification **MUST** appear in an in-application notification list for the recipient and **MUST** also be delivered by email. Every alert links directly to the record that raised it. Alerts are evaluated by a scheduled job that runs at least once every 24 hours; the run time is configurable. An alert **MUST NOT** repeat for the same record and same trigger within a configurable suppression window (default 24 hours).

ACCEPTANCE CRITERIA

1. **AC-CC-NOT-01.1** — Given a trigger condition becomes true, when the scheduled job next runs, then the alert appears in the recipient's notification list and an email is dispatched to their registered address.
2. **AC-CC-NOT-01.2** — Given the same condition remains true on the following run, when the job executes within the suppression window, then no duplicate alert or email is produced.
3. **AC-CC-NOT-01.3** — Given email delivery fails, when the failure is detected, then the in-application alert is still shown and the failure is logged for the System Administrator.

ASSUMPTION A-07 — NOTIFICATION CHANNEL

The source requires the system to “generate alerts” but does not name a channel. Email plus an in-application list is assumed. SMS is not included; if employer-facing or field notification is required, it is a separate requirement (**Q-04**).

ASSUMPTION A-08 — CONFIGURABLE THRESHOLDS

All alert thresholds in this document (inactivity days, days before expiry, days before a deadline) are configurable by the System Administrator. The source specifies only one value explicitly — 30 days of inactivity — and presents it as an example rather than a fixed rule.

6. Module 1 — Contribution, Surcharge & Wages Referral Register

6.1 Business rationale

EMS, under the Inspectorate function, performs compliance monitoring of employers. When an employer's non-compliance is referred to LSD, the nature of the work changes: it becomes a legal process requiring tracking, documentation and accountability. Module 1 exists to manage that legal process from receipt of the referral to closure.

The source states five reasons for the system. Reasons 1 and 4 both concern tracking the progress of a referral, and reason 5 restates the reporting requirements already listed in the functional requirements column. Consolidated, the rationale is:

DRIVER	BUSINESS NEED	SATISFIED BY
Complete record	Once EMS refers a case, LSD becomes responsible for assessing the offence and the evidence received, determining breach of the SINPF Act, deciding whether legal action is possible, preparing notices and letters, and initiating prosecution or debt recovery. Without a system, referrals are incomplete, delayed and inaccurately reported.	FR-M1-001 to FR-M1-004
Defensible evidence	Legal action depends on contribution, surcharge and wages history, compliance notes, dates of default and correspondence records. Preserving these automatically creates a documentation trail that protects SINPF in court and enforces consistency.	CC-DOC-01 to CC-DOC-04, CC-AUD-01, FR-M1-008
Workload visibility	LSD needs to know how many cases EMS has referred, which employers are high-risk, which matters are urgent or overdue, and which officer holds each case — for workload balancing, planning and performance reporting.	FR-M1-004, FR-M1-017, RPT-M1-03
Progress monitoring	LSD must follow up with employers, issue demand letters, prepare affidavits, file matters in court, and close cases once paid or resolved — so that no referral stalls or goes cold.	FR-M1-006, FR-M1-007, ALT-M1-03
Mandatory reporting	The Executive, the Board, MLS, GM, ARMC and external auditors require periodic data on referral volumes, values escalated to Legal, amounts involved in legal action, and prosecution or debt-recovery outcomes.	RPT-M1-01 to RPT-M1-06, CC-RPT-01

6.2 User stories

ID	STORY
US-M1-01	As a Legal Registry Clerk , I want to create a referral record capturing the employer, the referral date, the case type and the amounts claimed, so that every case EMS sends to Legal is captured the day it arrives.
US-M1-02	As the Manager Legal Services , I want to assign each referral to a Legal Officer, so that accountability for every case is explicit and workload can be balanced.
US-M1-03	As a Legal Officer , I want to move a referral through defined stages and record why, so that the case history is complete and no case stalls silently.

US-M1-04	As a Legal Officer , I want to upload referral letters, contribution statements, compliance notes, correspondence, notices and drafts against the case, so that the evidence is preserved and legally defensible.
US-M1-05	As a Legal Officer , I want to be alerted to new referrals, approaching deadlines and cases that have gone quiet, so that statutory and court deadlines are not missed.
US-M1-06	As the Manager Legal Services , I want periodic reports on referral volumes, outstanding amounts, officer workload, outcomes and payments, so that I can report to GM, ARMC, the Board and external auditors without manual compilation.
US-M1-07	As the Manager Legal Services , I want high-risk employers identified — no longer in operation, statute barred, or similar — so that effort is directed at recoverable claims.

6.3 Data model

The source lists five fields for a referral. Those five are not sufficient to satisfy the status, alert and reporting requirements stated in the same document — court dates cannot be alerted on if no court date is stored, and total paid cannot be reported if no payment is recorded. The additional fields below are marked **Proposed** and each names the requirement that depends on it.

Entity: Referral

FIELD	TYPE	REQUIRED	RULES AND NOTES
referral_id	UUID	System	Primary key. Not user-facing.
referral_ref	String(20)	System	Human-readable reference, format <code>LSD-REF-YYYY-NNNN</code> , sequential within year, immutable once issued. Proposed — needed for correspondence and court documents.
employer_name	String(200)	Yes	Source field. Free text unless an employer master is available (Q-05).
employer_code	String(20)	Yes	Source field. The SINPF employer identifier. Format and validation rule to be supplied (Q-05). Multiple referrals may share an employer code.
referral_date	Date	Yes	Source field. The date EMS referred the case. Must not be in the future. Governing date for RPT-M1-01.
date_received	Date	Yes	Proposed — the date LSD received the referral, which may differ from the referral date. Required for turnaround measurement and to start deadline clocks.
case_types	Enum[] multi-select	Yes	Source field. At least one of: <code>UNPAID_CONTRIBUTION</code> , <code>UNPAID_SURCHARGE</code> , <code>WAGES_RECORD</code> . Multi-select because the source describes a single referral carrying contribution, surcharge and wages elements together (Q-06).

<code>contribution_amount</code>	Money	Conditional	Required when <code>UNPAID_CONTRIBUTION</code> is selected. Must be greater than zero.
<code>surcharge_amount</code>	Money	Conditional	Required when <code>UNPAID_SURCHARGE</code> is selected. Must be greater than zero.
<code>total_claimed</code>	Money	Derived	Computed as <code>contribution_amount</code> + <code>surcharge_amount</code> . Never entered by a user. See BR-M1-01.
<code>wages_periods</code>	String(200)	Conditional	Required when <code>WAGES_RECORD</code> is selected. The wage periods outstanding, e.g. “Jan–Jun 2026”. Proposed — a wages-record case has no monetary claim until the records are produced, so it needs its own descriptor.
<code>period_of_default_from</code>	Date	No	Proposed — the source names “dates of default” as evidence the system must preserve.
<code>period_of_default_to</code>	Date	No	Must be on or after <code>period_of_default_from</code> .
<code>assigned_officer_id</code>	FK → User	No	Source field. Null until assigned. Only users holding the Legal Officer role are selectable.
<code>assigned_at</code>	DateTime	System	Set when assignment is made or changed.
<code>status</code>	Enum	Yes	Source field. One of the eleven values in Section 6.4. Defaults to <code>RECEIVED</code> on creation.
<code>status_changed_at</code>	DateTime	System	Used by the inactivity alert ALT-M1-03.
<code>court_venue</code>	Enum	Conditional	<code>MAGISTRATE_COURT</code> <code>HIGH_COURT</code> . Required once status reaches <code>IN_COURT</code> . Proposed — the source names both venues.
<code>court_case_number</code>	String(50)	Conditional	Required once status reaches <code>IN_COURT</code> . Proposed .
<code>date_filed</code>	Date	Conditional	Required once status reaches <code>IN_COURT</code> . Proposed .
<code>next_court_date</code>	Date	No	Proposed — ALT-M1-02 requires alerting on court dates, which cannot function without this field.
<code>response_due_date</code>	Date	No	Proposed — the deadline by which the employer must respond to a notice. Drives ALT-M1-02.
<code>risk_flags</code>	Enum[] multi-select	No	<code>NO_LONGER_OPERATING</code> <code>STATUTE_BARRED</code> <code>UNTRACEABLE</code> <code>IN_LIQUIDATION</code> <code>OTHER</code> . See FR-M1-017.
<code>risk_note</code>	Text	Conditional	Required when any risk flag is set, or when <code>OTHER</code> is selected.

outcome	Enum	Conditional	PAID_IN_FULL SETTLED_BY_DEED PARTIALLY_RECOVERED WAGES_RECORDS_OBTAINED WITHDRAWN NOT_FILED IRRECOVERABLE . Required on closure. Proposed — RPT-M1-04 reports “case outcomes” but the source defines no outcome values.
closure_reason	Text	Conditional	Required when status is CLOSED , WITHDRAWN or NOT_FILED .
closed_at	Date	System	Set when the case reaches a terminal status. Governing date for RPT-M1-04.

Entity: ReferralPayment — Proposed

The source requires a “Total paid” report and a “Contribution and Surcharge Paid” status, but defines no payment record. Without one, paid amounts can only be inferred from status, which cannot represent part-payment or instalments under a deed of settlement.

FIELD	TYPE	REQUIRED	RULES AND NOTES
payment_id	UUID	System	Primary key.
referral_id	FK → Referral	Yes	Owning referral.
payment_date	Date	Yes	Not in the future. Governing date for RPT-M1-05.
amount_contribution	Money	Conditional	Zero or more. At least one of the two amount fields must be greater than zero.
amount_surcharge	Money	Conditional	Zero or more.
receipt_reference	String(50)	No	Finance receipt number, where available.
evidence_document_id	FK → Document	No	Payment evidence attachment.

Entity: ReferralAction — Proposed

The source requires the system to record “actions taken”. A status is a state, not an action; several actions (a demand letter, an affidavit, a site visit) can occur within one status.

FIELD	TYPE	REQUIRED	RULES AND NOTES
action_id	UUID	System	Primary key.
referral_id	FK → Referral	Yes	Owning referral.
action_type	Enum	Yes	DEMAND_LETTER_ISSUED NOTICE_SERVED EMPLOYER_MEETING AFFIDAVIT_PREPARED COURT_APPEARANCE FOLLOW_UP OTHER . Configurable reference data.
action_date	Date	Yes	Not in the future.

notes	Text	Yes	What was done and the result.
performed_by	FK → User	System	Defaults to the acting user; may be overridden by MLS.

BUSINESS RULE BR-M1-01 — CLAIM TOTAL

total_claimed is always contribution_amount + surcharge_amount . It is never keyed in. A wages-record-only referral has a total_claimed of zero and is reported separately by count, not by value, so that outstanding-value reports are not distorted.

BUSINESS RULE BR-M1-02 — OUTSTANDING BALANCE

outstanding = total_claimed - $\Sigma(\text{payments.amount_contribution} + \text{payments.amount_surcharge})$, evaluated at report date. Outstanding can never be negative; an over-payment is flagged for review rather than reported as a negative balance.

BUSINESS RULE BR-M1-03 — AMOUNTS ARE CORRIGIBLE, AND CORRECTIONS ARE VISIBLE

Claim amounts may be corrected after creation, because EMS figures are sometimes revised. Every change MUST be captured by CC-AUD-01 with old value, new value and a mandatory reason. Reports run for a closed prior period MUST reproduce the figures as at that period's end (Q-07 — confirm whether restated figures should flow back into published reports).

6.4 Referral status lifecycle

CONFLICT RESOLVED

The source contains two different status lists. The narrative column names four states — Pending Review, Under Investigation, In Court, Closed — while the functional requirements column names ten. The ten-value list is adopted as canonical because it is the one written as a requirement; the four narrative values are mapped onto it below so that no source term is lost. One value has been split: the source phrase “Prepared for Prosecution/Civil in Magistrate Court or High Court” conflates preparing to file with having filed, and the alerting requirement for court dates only makes sense after filing (Q-08).

CODE	DISPLAY LABEL (SOURCE WORDING)	NARRATIVE TERM	MEANING AND ENTRY CONDITION
RECEIVED	Received / Pending Review	Pending Review	Initial status on creation. The referral is logged but not yet assessed.
UNDER_ASSESSMENT	Under Legal Assessment	Under Investigation	An officer is assessing the offence, the evidence from EMS, and whether the SINPF Act has been breached. Requires an assigned officer.
NOTICE_SERVED	Letter Issued / Notice Served	—	A demand letter or legal notice has been issued to the employer. Requires a corresponding action record and, normally, a response_due_date .
SETTLEMENT	Negotiation / Settlement in Progress / Deed of Settlement	—	The employer is negotiating or a deed of settlement is in place.

COURT_PREP	Prepared for Prosecution / Civil Action	—	Papers are being prepared for filing. No court reference exists yet.
IN_COURT	Filed in Magistrate Court or High Court	In Court	Proposed split. The matter has been filed. Requires <code>court_venue</code> , <code>court_case_number</code> and <code>date_filed</code> .
PAID	Contribution and Surcharge Paid	—	The monetary claim has been settled in full. Requires payments recorded such that outstanding is zero.
WAGES_RECEIVED	Wages Record Received	—	The outstanding wages records have been produced by the employer.
CLOSED	Case Closed	Closed	Terminal. All obligations discharged or the case is otherwise concluded. Requires an outcome and closure reason.
WITHDRAWN	Case Withdrawn	—	Terminal. LSD or EMS has withdrawn the referral. Requires a closure reason.
NOT_FILED	Case Not Filed in the Courts	—	Terminal. A decision was taken not to litigate — commonly because the employer is statute barred or no longer operating. Requires a closure reason and normally a risk flag.

Permitted transitions

Any transition not listed MUST be rejected by the server with an explanatory message. Terminal statuses have no outward transitions except reopening (`FR-M1-013`).

FROM	PERMITTED NEXT STATUS
RECEIVED	UNDER_ASSESSMENT · WITHDRAWN
UNDER_ASSESSMENT	NOTICE_SERVED · SETTLEMENT · COURT_PREP · WAGES_RECEIVED · NOT_FILED · WITHDRAWN
NOTICE_SERVED	SETTLEMENT · COURT_PREP · PAID · WAGES_RECEIVED · NOT_FILED · WITHDRAWN
SETTLEMENT	COURT_PREP · PAID · WAGES_RECEIVED · WITHDRAWN
COURT_PREP	IN_COURT · SETTLEMENT · NOT_FILED · WITHDRAWN
IN_COURT	SETTLEMENT · PAID · WAGES_RECEIVED · CLOSED · WITHDRAWN
PAID	WAGES_RECEIVED · CLOSED
WAGES_RECEIVED	PAID · COURT_PREP · CLOSED
CLOSED · WITHDRAWN · NOT_FILED	None, except reopening by MLS with a mandatory reason.

ASSUMPTION A-09 — PARALLEL MILESTONES

PAID and **WAGES_RECEIVED** are modelled as statuses because the source lists them as statuses. They are arguably milestones rather than states: a referral covering both money and records can satisfy one before the other. The transition table above allows movement between them in either direction so this case is representable. If LSD confirms they are milestones, they should be modelled as boolean completion flags instead and removed from the status enumeration (**Q-09**).

6.5 Functional requirements

FR-M1-001 Create a referral record

MUST

The system **MUST** allow an authorised user to create a referral record capturing, as a minimum, the employer name, employer code, referral date, case type or types, and the amounts claimed, as defined in Section 6.3. On save, the system assigns a `referral_ref` and sets status to `RECEIVED`.

ACCEPTANCE CRITERIA

1. **AC-M1-001.1** — Given all required fields are complete and valid, when the user saves, then the referral is created with status `RECEIVED`, a unique `referral_ref` in the format `LSD-REF-YYYY-NNNN`, and an audit entry naming the creating user.
2. **AC-M1-001.2** — Given a required field is empty, when the user saves, then the record is not created and every missing field is identified individually.
3. **AC-M1-001.3** — Given a referral date later than today, when the user saves, then the system rejects the date with the message that the referral date cannot be in the future.
4. **AC-M1-001.4** — Given case type `UNPAID_CONTRIBUTION` is selected and the contribution amount is blank or zero, when the user saves, then the system rejects the record and states that a contribution amount is required for that case type.
5. **AC-M1-001.5** — Given contribution 10,000.00 and surcharge 2,500.00 are entered, when the record is saved, then `total_claimed` displays 12,500.00 and cannot be edited directly.

FR-M1-002 Detect existing referrals for the same employer

SHOULD

When a referral is created for an employer code that already has one or more open referrals, the system **SHOULD** warn the user and list them, so that duplicate cases are not opened for the same default. The user may proceed after acknowledging the warning, because an employer can legitimately have several distinct referrals.

ACCEPTANCE CRITERIA

1. **AC-M1-002.1** — Given employer code E-0042 has an open referral, when a user creates a second referral for E-0042, then a warning lists the existing referral references, statuses and periods of default before the save completes.
2. **AC-M1-002.2** — Given the warning is shown, when the user confirms, then the new referral is created and the acknowledgement is recorded in the audit trail.

FR-M1-003 Record the period of default and wages periods

SHOULD

The system **SHOULD** capture the period of default for monetary claims and the outstanding wage periods for wages-record claims. The source names dates of default among the evidence the system must preserve, and a claim cannot be pleaded without them.

ACCEPTANCE CRITERIA

1. **AC-M1-003.1** — Given a default period end date earlier than its start date, when the user saves, then the system rejects the range.
2. **AC-M1-003.2** — Given case type `WAGES_RECORD` is selected, when the user saves without wage periods, then the system requires them.

FR-M1-004 Assign a referral to a Legal Officer**MUST**

The system **MUST** allow assignment of a referral to a Legal Officer, and **MUST** allow reassignment. Only users holding the Legal Officer role are selectable. Reassignment requires a reason. Both the assignee and the previous assignee are notified.

ACCEPTANCE CRITERIA

1. **AC-M1-004.1** — Given an unassigned referral, when MLS assigns it to a Legal Officer, then the officer is recorded, `assigned_at` is set, the officer receives an alert, and the change appears in the audit trail.
2. **AC-M1-004.2** — Given the assignment picker is open, when the user browses it, then only active users holding the Legal Officer role appear; deactivated users do not.
3. **AC-M1-004.3** — Given an assigned referral, when MLS reassigns it without entering a reason, then the change is refused.
4. **AC-M1-004.4** — Given a Legal Officer without the MLS role, when they attempt to reassign a case, then the action is denied.

FR-M1-005 Bulk assignment**PROPOSED**

MLS **SHOULD** be able to select several referrals from the list view and assign them to one officer in a single action. This supports the workload-balancing purpose stated in the source without requiring cases to be opened one at a time.

ACCEPTANCE CRITERIA

1. **AC-M1-005.1** — Given five referrals are selected, when MLS assigns them to one officer with a reason, then all five are updated, five audit entries are written, and the officer receives one consolidated alert.
2. **AC-M1-005.2** — Given one of the selected referrals is in a terminal status, when the bulk action runs, then that referral is skipped and reported as skipped, and the remainder succeed.

FR-M1-006 Track referral status through the defined lifecycle**MUST**

The system **MUST** track each referral through the eleven statuses defined in Section 6.4 and **MUST** enforce the permitted transition table on the server. Every status change records the acting user, the timestamp, the previous status and the new status.

ACCEPTANCE CRITERIA

1. **AC-M1-006.1** — Given a referral in `RECEIVED`, when the user opens the status selector, then only `UNDER_ASSESSMENT` and `WITHDRAWN` are offered.
2. **AC-M1-006.2** — Given a referral in `RECEIVED`, when a request to set status directly to `CLOSED` is submitted through the API, then the server rejects it with an invalid-transition error and no change is persisted.
3. **AC-M1-006.3** — Given any status change, when the case history is viewed, then the entry shows both statuses, the user and the timestamp.
4. **AC-M1-006.4** — Given a referral with no assigned officer, when a user attempts to move it to `UNDER_ASSESSMENT`, then the change is refused with a message that an officer must be assigned first.

FR-M1-007 Enforce entry conditions on status changes**MUST**

The system **MUST** enforce the data required by each status before allowing entry into it, so that the record is complete at the moment the case advances rather than retrospectively.

TARGET STATUS	REQUIRED BEFORE THE TRANSITION IS ACCEPTED
UNDER_ASSESSMENT	An assigned officer.
NOTICE_SERVED	An action record of type DEMAND_LETTER_ISSUED or NOTICE_SERVED , and an attached document of type Legal Notice.
IN_COURT	court_venue , court_case_number and date_filed .
PAID	Payment records reducing outstanding to zero (BR-M1-02).
WAGES_RECEIVED	An attached document of type Wages Record.
CLOSED	An outcome value and a closure_reason .
WITHDRAWN NOT_FILED	A closure_reason . MLS approval (A-02).

ACCEPTANCE CRITERIA

1. **AC-M1-007.1** — Given a referral in COURT_PREP with no court case number, when the user selects IN_COURT , then the system prompts for venue, case number and filing date and does not save until all three are supplied.
2. **AC-M1-007.2** — Given a referral with an outstanding balance above zero, when the user selects PAID , then the change is refused and the outstanding balance is displayed.
3. **AC-M1-007.3** — Given a Legal Officer without MLS rights, when they select WITHDRAWN , then the case is placed in a pending-approval state visible to MLS rather than being withdrawn immediately.

FR-M1-008 Store referral documents and evidence**MUST**

The system **MUST** allow uploading and storing of EMS referral letters, contribution statements, compliance notes, employer correspondence, legal notices and drafts against a referral. Behaviour is defined by CC-DOC-01 through CC-DOC-04 ; the Module 1 document types are listed under CC-DOC-02 .

ACCEPTANCE CRITERIA

1. **AC-M1-008.1** — Given a referral, when a user uploads an EMS referral letter, then it is stored, classified, and listed on the referral with uploader and timestamp.
2. **AC-M1-008.2** — Given a referral with documents of several types, when the user filters the document list by type, then only documents of that type are shown.

FR-M1-009 Record actions taken on a case**PROPOSED**

The system SHOULD allow a Legal Officer to record dated actions against a referral — demand letters, notices, meetings, affidavits, court appearances and follow-ups — using the `ReferralAction` entity. The source requires the system to track “actions taken”, which the status field alone cannot represent.

ACCEPTANCE CRITERIA

1. **AC-M1-009.1** — Given a referral, when an officer records an action with type, date and notes, then it appears in a chronological case history alongside status changes and document uploads.
2. **AC-M1-009.2** — Given an action is recorded, when the referral is viewed, then `status_changed_at` is unaffected but the inactivity clock in `ALT-M1-03` resets.

FR-M1-010 Record payments against a referral**PROPOSED**

The system SHOULD allow recording of one or more payments against a referral, split between contribution and surcharge, so that part-payments and instalments under a deed of settlement are represented and the total-paid and outstanding reports can be produced.

ACCEPTANCE CRITERIA

1. **AC-M1-010.1** — Given a referral claiming 12,500.00 with a recorded payment of 5,000.00, when the referral is viewed, then paid-to-date shows 5,000.00 and outstanding shows 7,500.00.
2. **AC-M1-010.2** — Given payments totalling more than the claim, when the user saves, then the system warns of over-payment and requires confirmation before saving, and outstanding is displayed as zero rather than a negative figure.
3. **AC-M1-010.3** — Given a payment is recorded, when it brings outstanding to zero, then the system offers to move the referral to `PAID` but does not do so automatically.

FR-M1-011 Record receipt of wages records**MUST**

The system MUST allow an officer to record that outstanding wages records have been received, with the periods covered and the received date, and to attach the records themselves.

ACCEPTANCE CRITERIA

1. **AC-M1-011.1** — Given a wages-record referral, when the officer records receipt and attaches a document of type Wages Record, then the status may move to `WAGES_RECEIVED`.
2. **AC-M1-011.2** — Given no Wages Record document is attached, when the officer selects `WAGES_RECEIVED`, then the change is refused per `FR-M1-007`.

FR-M1-012 Close a referral**MUST**

The system **MUST** allow a referral to be closed once paid or otherwise resolved, capturing the outcome and a closure reason, and setting `closed_at`. Closed referrals become read-only except for document upload, which remains available so that late-arriving evidence can still be filed.

ACCEPTANCE CRITERIA

1. **AC-M1-012.1** — Given a referral in `PAID`, when MLS closes it with outcome `PAID_IN_FULL` and a reason, then status becomes `CLOSED`, `closed_at` is set to today, and the case is excluded from open-case lists and inactivity alerts.
2. **AC-M1-012.2** — Given a closed referral, when a user attempts to edit any field other than adding a document, then the action is refused.
3. **AC-M1-012.3** — Given closure is attempted with no outcome selected, when the user saves, then closure is refused.

FR-M1-013 Reopen a closed referral**PROPOSED**

MLS **SHOULD** be able to reopen a referral in any terminal status, with a mandatory reason. The referral returns to `UNDER_ASSESSMENT` and `closed_at` is cleared. Reopening is needed where a settlement defaults or where a case is closed in error; the source is silent on it (`Q-10`).

ACCEPTANCE CRITERIA

1. **AC-M1-013.1** — Given a closed referral, when MLS reopens it with a reason, then status becomes `UNDER_ASSESSMENT`, `closed_at` is cleared, and the audit trail records both the original closure and the reopening.
2. **AC-M1-013.2** — Given a referral is reopened after a period has been reported on, when that historical period's report is regenerated, then the figures for the closed period are unchanged (`BR-M1-03`).

FR-M1-014 Referral list view, search and filters**MUST**

The system **MUST** provide a referral list view implementing `CC-SRCH-01`. Keyword search covers `referral_ref`, `employer_name`, `employer_code` and `court_case_number`. Filters cover status, case type, assigned officer, risk flag, referral date range, and outstanding amount range. Default sort is referral date, newest first.

ACCEPTANCE CRITERIA

1. **AC-M1-014.1** — Given the filter “assigned officer = X” and “status = `IN_COURT`”, when applied, then only that officer's in-court referrals are listed with a result count.
2. **AC-M1-014.2** — Given a partial employer name, when entered in search, then all matching referrals are returned regardless of letter case.

FR-M1-015 Officer workload dashboard**SHOULD**

The system **SHOULD** present, on sign-in, each Legal Officer's open referrals grouped by status, with counts of overdue items and items requiring action. MLS sees the same view across all officers. This delivers the workload-balancing and “urgent or overdue” visibility the source calls for.

ACCEPTANCE CRITERIA

1. **AC-M1-015.1** — Given a Legal Officer with open cases, when they sign in, then their dashboard shows counts by status, cases with a response due date in the past, and cases inactive beyond the threshold.
2. **AC-M1-015.2** — Given MLS signs in, when the dashboard loads, then open case counts and overdue counts are shown per officer.

FR-M1-016 Case history timeline**SHOULD**

Each referral **SHOULD** present a single chronological history combining status changes, assignments, actions, payments and document uploads, so that a case can be reconstructed for court or for an auditor from one screen.

ACCEPTANCE CRITERIA

1. **AC-M1-016.1** — Given a referral with events of every kind, when the history is viewed, then all events appear in date order with actor, timestamp and event description.
2. **AC-M1-016.2** — Given the history is exported to PDF, when opened, then it contains the same events in the same order, with the referral reference and export timestamp in the header.

FR-M1-017 Flag high-risk employers**MUST**

The system **MUST** allow a referral to be flagged with one or more risk conditions — no longer operating, statute barred, untraceable, in liquidation, or other — with a supporting note. Risk-flagged referrals **MUST** be filterable and **MUST** be visually distinguished in list views.

GAP CLOSED

The source names this need in the narrative column — knowing “which employers are high-risk (no longer in operation, statute barred etc)” — but the functional requirements column contains no corresponding requirement. It is specified here so it is not lost in build.

ACCEPTANCE CRITERIA

1. **AC-M1-017.1** — Given a referral, when an officer applies the flag `STATUTE_BARRED` with a note, then the flag is displayed on the referral and in the list view, and is recorded in the audit trail.
2. **AC-M1-017.2** — Given any risk flag is selected without a note, when the user saves, then the save is refused.
3. **AC-M1-017.3** — Given the list view is filtered by risk flag, when results render, then only flagged referrals appear.

Note: whether statute-barred status should be calculated automatically from the period of default and a limitation period is raised as **Q-11**. This requirement specifies manual flagging only.

6.6 Alerts

All alerts follow **CC-NOT-01** for delivery, suppression and linking. Thresholds are configurable per **A-08**.

ID	ALERT	TRIGGER CONDITION	RECIPIENTS
ALT-M1-01	New referral	A referral is created, and again when it is assigned. The creation alert fires whether or not an officer has been assigned.	MLS on creation; assigned officer on assignment.
ALT-M1-02	Approaching deadline	<code>response_due_date</code> or <code>next_court_date</code> falls within the lead time. Default lead times: 7 days and 3 days before, and on the day. A second alert fires the day after a response due date passes without a status change.	Assigned officer; MLS on the overdue alert.

ALT-M1-03	Case inactivity	A referral in a non-terminal status has had no status change, action, payment or document upload for the configured period. Default 30 days, as given in the source.	Assigned officer; MLS.
ALT-M1-04	Unassigned referral	Proposed. A referral has remained in RECEIVED with no assigned officer for more than 3 days.	MLS.

ASSUMPTION A-10 — WHAT COUNTS AS ACTIVITY

For **ALT-M1-03**, activity means any status change, action record, payment or document upload. Merely opening or viewing a case does not reset the clock. The source says only “cases inactive for more than a set period”, so this definition requires confirmation.

6.7 Reports

Six reports are defined. Each uses the shared period selector (**CC-RPT-01**) and export behaviour (**CC-RPT-02**); those attributes are not repeated below. Each report names one **governing date**, which is the field used to decide whether a record falls inside the selected period — without this, two reports over the same period will disagree.

ID	REPORT	GOVERNING DATE	MEASURES, GROUPING AND FILTERS
RPT-M1-01	Referrals Received	referral_date	Count of referrals and total value claimed. Grouped by case type and by month. Filters: case type, assigned officer, risk flag.
RPT-M1-02	Outstanding Amounts by Referral	referral_date	Line-level detail: referral reference, employer, case type, claimed, paid to date, outstanding, status, assigned officer, days since referral. Sorted by outstanding, descending. This is the detail view of RPT-M1-06.
RPT-M1-03	Referrals per Legal Officer	referral_date	Per officer: referrals received, currently open, closed in period, total claimed, total recovered, average days to closure. Supports workload balancing and performance reporting.
RPT-M1-04	Case Outcomes	closed_at	Count and value by outcome . Includes prosecution and debt-recovery results named in the source. Filters: outcome, court venue, assigned officer.
RPT-M1-05	Total Paid	payment_date	Sum of payments, split contribution and surcharge. Grouped by month and by case type. Depends on FR-M1-010.
RPT-M1-06	Total Outstanding	As at period end	Single summary figure with breakdown by status and by age band (0–30, 31–90, 91–180, 180+ days since referral). A point-in-time position, not a movement over the period.

DE-DUPLICATION NOTE

The source lists “Outstanding amounts tied to legal referrals” and “Total outstanding” as two separate reports. They measure the same thing at different levels of detail, so they are specified as one detail report (RPT-M1-02) and one summary report (RPT-M1-06) drawing on a single calculation, BR-M1-02 . Reporting them from one formula prevents the two figures from diverging.

The narrative column separately requests total cases referred by EMS, value of unpaid contributions and surcharges escalated to Legal, amounts involved in legal action, and prosecution or debt-recovery outcomes. These are already satisfied by RPT-M1-01 , RPT-M1-06 and RPT-M1-04 and are not specified again.

ASSUMPTION A-11 — “AMOUNTS INVOLVED IN LEGAL ACTION”

Interpreted as the total claimed on referrals whose status is COURT_PREP or IN_COURT at period end. Provided as a status filter on RPT-M1-06 rather than as a separate report.

7. Module 2 — Contracts Register

USER STORY

US-M2-01 — As the **Legal Services Department**, we want to record, store and retrieve all contracts and agreements in a central register, so that contracts are accessible, monitored and managed throughout their lifecycle.

DATA MODEL — ENTITY **CONTRACT**

FIELD	TYPE	REQUIRED	RULES AND NOTES
<code>contract_id</code>	UUID	System	Primary key.
<code>contract_ref</code>	String(20)	System	Format <code>LSD-CON-YYYY-NNNN</code> . Proposed .
<code>contract_title</code>	String(200)	Yes	The name by which the contract is known. Searchable.
<code>parties</code>	String(200)[]	Yes	Source field “party names”. At least one party besides SINPF. Each party is separately searchable, so this is a repeating field, not a single free-text line (Q-12).
<code>contract_type</code>	Enum	Yes	Source values: <code>LEASE</code> <code>SERVICE_AGREEMENT</code> <code>MOU</code> , plus <code>SUPPLY</code> <code>CONSULTANCY</code> <code>OTHER</code> . Configurable reference data.
<code>start_date</code>	Date	Yes	Source field.
<code>end_date</code>	Date	Yes	Source field. Must be on or after <code>start_date</code> . Drives derived status and expiry filtering.
<code>contract_value</code>	Money	Yes	Source field. Zero is permitted for non-monetary agreements such as an MOU.
<code>currency</code>	Enum	Yes	Defaults to <code>SBD</code> . Proposed — foreign-currency contracts are plausible for a fund; confirm under Q-13.
<code>status</code>	Enum	Derived	<code>ACTIVE</code> <code>EXPIRED</code> <code>TERMINATED</code> . Derived per BR-M2-01; only termination is set by a user.
<code>terminated_date</code>	Date	Conditional	Required when the contract is terminated. Must fall between start and end dates.
<code>termination_reason</code>	Text	Conditional	Required when terminated.
<code>owning_department</code>	String(100)	No	Proposed — identifies who to contact about performance and renewal.
<code>linked_title_id</code>	FK → Title	No	Set for lease contracts over SINPF land. Supports FR-M5-004.
<code>documents</code>	File[]	—	Per CC-DOC-01. A signed contract document is required before status can be <code>ACTIVE</code> .

BUSINESS RULE BR-M2-01 — CONTRACT STATUS IS DERIVED, NOT TYPED

Status is computed on read: **TERMINATED** if **terminated_date** is set; otherwise **EXPIRED** if **end_date** is before today; otherwise **ACTIVE**. Deriving it prevents the register from showing contracts as active years after they lapsed, which is the failure mode a manual status field invites. The source says only that the system should “display contract status” — confirm this derivation under **Q-14**.

FUNCTIONAL REQUIREMENTS**FR-M2-001 Register a new contract****MUST**

The system **MUST** allow LSD to register a contract with its title, parties, type, start date, end date and value.

ACCEPTANCE CRITERIA

1. **AC-M2-001.1** — Given all required fields are valid, when the user saves, then the contract is created with a unique reference and a derived status of **ACTIVE** where the end date is in the future.
2. **AC-M2-001.2** — Given an end date earlier than the start date, when the user saves, then the record is rejected and the conflict is identified.
3. **AC-M2-001.3** — Given no party is entered, when the user saves, then the record is rejected.

FR-M2-002 Upload and store the signed contract document**MUST**

The system **MUST** allow upload and storage of the signed contract document, per **CC-DOC-01**. A contract with no signed document **MUST** be visually marked as incomplete in the register.

ACCEPTANCE CRITERIA

1. **AC-M2-002.1** — Given a contract with no attachment of type Signed Contract, when the register is listed, then the record shows an incomplete marker.
2. **AC-M2-002.2** — Given a signed contract is uploaded, when the record is reloaded, then the marker clears and the document is retrievable.

FR-M2-003 Categorise contracts by type**MUST**

The system **MUST** allow contracts to be tagged by category — lease, service agreement, MOU and the other configured values — and **MUST** allow the register to be filtered by category.

ACCEPTANCE CRITERIA

1. **AC-M2-003.1** — Given contracts of several types, when the user filters by **LEASE**, then only leases are returned.
2. **AC-M2-003.2** — Given a System Administrator adds a new contract type, when a user next creates a contract, then the new type is selectable.

FR-M2-004 Search and filter the contracts register**MUST**

Per **CC-SRCH-01** . Keyword search covers contract title, reference and party names. Filters cover contract type, status, expiry date range, and value range.

ACCEPTANCE CRITERIA

1. **AC-M2-004.1** — Given a party name fragment, when entered in search, then all contracts naming a matching party are returned, whether that party is first or later in the list.
2. **AC-M2-004.2** — Given an expiry range of the next 90 days, when applied, then only contracts whose end date falls in that window are returned.

FR-M2-005 Display contract status**MUST**

The register **MUST** display each contract as active, expired or terminated, derived per **BR-M2-01** , in both list and detail views.

ACCEPTANCE CRITERIA

1. **AC-M2-005.1** — Given a contract whose end date passed yesterday, when the register is viewed today, then it displays as **EXPIRED** with no user action having been taken.
2. **AC-M2-005.2** — Given a user terminates a contract with a date and reason, when the record is viewed, then it displays as **TERMINATED** regardless of its end date.

FR-M2-006 Alert on approaching contract expiry**PROPOSED**

The system **SHOULD** alert the owning department and LSD when a contract is approaching its end date, at configurable lead times (default 90, 60 and 30 days). The source requires expiry alerting for insurance policies but not for contracts; the same lifecycle risk applies, so this is raised for decision (**Q-15**).

ACCEPTANCE CRITERIA

1. **AC-M2-006.1** — Given a contract ending in 60 days, when the alert job runs, then an alert is raised naming the contract, its parties and its end date.
2. **AC-M2-006.2** — Given a terminated contract, when the job runs, then no expiry alert is raised for it.

8. Module 3 — Medical & Property Insurance Register

USER STORY

US-M3-01 — As the **Legal Services Department**, we want to record and track medical and property insurance policies, so that coverage details, expiry dates and insurer obligations are clearly monitored.

DATA MODEL — ENTITY **INSURANCEPOLICY**

FIELD	TYPE	REQUIRED	RULES AND NOTES
<code>policy_id</code>	UUID	System	Primary key.
<code>policy_number</code>	String(50)	Yes	The insurer's policy number. Must be unique per insurer. Proposed — implied by “policy details” and required to identify a policy on renewal.
<code>insurer_name</code>	String(150)	Yes	Source field “insurer details”.
<code>insurer_contact</code>	String(200)	No	Named contact, phone or email for claims and renewal.
<code>policy_type</code>	Enum	Yes	<code>MEDICAL</code> <code>PROPERTY</code> . Source restricts filtering to these two.
<code>insured_subject</code>	String(200)	Yes	Source field “insured asset/person”. Holds a person, a class of persons, or an asset description.
<code>linked_title_id</code>	FK → Title	No	Set where a property policy covers a registered SINPF title. Proposed .
<code>coverage_start</code>	Date	Yes	Source field “coverage period”, split into two explicit fields.
<code>coverage_end</code>	Date	Yes	Must be after <code>coverage_start</code> . Drives expiry flagging.
<code>policy_value</code>	Money	Yes	Source field. The sum insured.
<code>premium_amount</code>	Money	No	Proposed — needed if renewal budgeting is expected (Q-16).
<code>status</code>	Enum	Derived	<code>ACTIVE</code> <code>EXPIRING_SOON</code> <code>EXPIRED</code> , derived per BR-M3-01.
<code>documents</code>	File[]	—	Per CC-DOC-01.

BUSINESS RULE BR-M3-01 — EXPIRY STATES

A policy is `EXPIRED` when `coverage_end` is before today; `EXPIRING_SOON` when `coverage_end` falls within the configured warning window (default 60 days); otherwise `ACTIVE` . The source requires the system to “flag upcoming insurance expiries” without naming a window, so the window is configurable (A-12).

FUNCTIONAL REQUIREMENTS

FR-M3-001 Register an insurance policy

MUST

The system MUST allow registration of a policy with insurer details, policy type, coverage period, insured asset or person, and policy value.

ACCEPTANCE CRITERIA

1. **AC-M3-001.1** — Given valid details, when the user saves, then the policy is created and its derived status reflects its coverage end date.
2. **AC-M3-001.2** — Given a coverage end date on or before the start date, when the user saves, then the record is rejected.
3. **AC-M3-001.3** — Given a policy number that already exists for the same insurer, when the user saves, then the system warns of the duplicate and requires confirmation.

FR-M3-002 Store policy documents

MUST

The system MUST store insurance policy documents against the policy record, per **CC-DOC-01**.

ACCEPTANCE CRITERIA

1. **AC-M3-002.1** — Given a policy, when a user uploads the policy schedule, then it is listed against that policy and retrievable by anyone able to view the policy.

FR-M3-003 Filter by insurance type

MUST

The register MUST be filterable by insurance type — medical or property — and searchable per **CC-SRCH-01** on insurer name, policy number and insured subject.

ACCEPTANCE CRITERIA

1. **AC-M3-003.1** — Given policies of both types, when the user filters by **MEDICAL**, then only medical policies are returned with a result count.

FR-M3-004 Flag and alert upcoming policy expiries

MUST

The system MUST flag policies approaching expiry in the register, and MUST raise an alert per **CC-NOT-01** at configurable lead times (default 60 and 30 days before, and on the expiry date).

ACCEPTANCE CRITERIA

1. **AC-M3-004.1** — Given a policy expiring in 45 days and a 60-day window, when the register is listed, then that policy is displayed as **EXPIRING_SOON** and is sortable to the top.
2. **AC-M3-004.2** — Given a policy expiring in 30 days, when the alert job runs, then an alert naming the insurer, policy number and expiry date is raised to LSD.
3. **AC-M3-004.3** — Given the window is changed from 60 to 90 days, when the register is next viewed, then policies expiring within 90 days are flagged, with no code change.

9. Module 4 — Legal Opinions Registry

USER STORY

US-M4-01 — As the **Legal Services Department**, we want to record and retrieve legal opinions issued by the department, so that institutional legal advice is preserved, consistent and reusable.

DATA MODEL — ENTITY **LEGALOPINION**

FIELD	TYPE	REQUIRED	RULES AND NOTES
<code>opinion_id</code>	UUID	System	Primary key.
<code>opinion_ref</code>	String(20)	System	Format <code>LSD-OPN-YYYY-NNNN</code> . Proposed — an opinion is cited by reference in later advice.
<code>subject_matter</code>	String(250)	Yes	Source field. Searchable.
<code>requesting_department</code>	String(100)	Yes	Source field. Configurable list of SINPF departments.
<code>date_requested</code>	Date	No	Proposed — allows turnaround to be measured.
<code>author_id</code>	FK → User	Yes	Source field “author”. Defaults to the creating user; may be changed while the opinion is in draft.
<code>opinion_date</code>	Date	Yes	Source field “date of the legal opinion”. The date the opinion was issued.
<code>summary</code>	Text	No	Proposed — a short conclusion, so that reusable advice can be assessed without opening the attachment.
<code>keywords</code>	String(50)[]	No	Source requirement for keyword and subject-based search.
<code>state</code>	Enum	Yes	<code>DRAFT</code> <code>FINALISED</code> . Defaults to <code>DRAFT</code> . Finalisation is irreversible per BR-M4-01.
<code>supersedes_opinion_id</code>	FK → LegalOpinion	No	Set when this opinion revises an earlier finalised opinion. Proposed — the mechanism by which advice can be corrected without editing a finalised record.
<code>documents</code>	File[]	—	Per CC-DOC-01. A signed opinion document is required before finalisation.

BUSINESS RULE BR-M4-01 — FINALISED OPINIONS ARE IMMUTABLE

The source requires the system to restrict editing of finalised legal opinions. Finalisation is therefore a one-way transition: once finalised, no field may be changed and no document may be replaced by any role. A correction is issued as a new opinion that references the original through `supersedes_opinion_id`; the original remains retrievable and is marked superseded. This preserves the institutional record of what advice was given and when.

FUNCTIONAL REQUIREMENTS

FR-M4-001 Record a legal opinion

MUST

The system **MUST** allow entry of a legal opinion with its subject matter and requesting department, and **MUST** record the author and the date of the opinion.

ACCEPTANCE CRITERIA

1. **AC-M4-001.1** — Given subject matter, requesting department, author and opinion date, when the user saves, then the opinion is created in **DRAFT** with a unique reference.
2. **AC-M4-001.2** — Given the author field is left untouched, when the record is saved, then the author defaults to the creating user.
3. **AC-M4-001.3** — Given an opinion date in the future, when the user saves, then the record is rejected.

FR-M4-002 Upload the signed opinion

MUST

The system **MUST** allow upload of the signed legal opinion document, per **CC-DOC-01**.

ACCEPTANCE CRITERIA

1. **AC-M4-002.1** — Given a draft opinion, when the user uploads a document of type Signed Legal Opinion, then it is stored against the opinion and finalisation becomes available.

FR-M4-003 Keyword and subject search

MUST

The registry **MUST** support keyword and subject-based search per **CC-SRCH-01**, across subject matter, keywords, summary and requesting department, so that previous advice is reusable.

ACCEPTANCE CRITERIA

1. **AC-M4-003.1** — Given an opinion tagged with the keyword “surcharge”, when a user searches for surcharge, then that opinion is returned with its subject matter, author and date.
2. **AC-M4-003.2** — Given results are returned, when the user filters by requesting department, then only opinions requested by that department remain.

FR-M4-004 Finalise and lock an opinion

MUST

The system **MUST** restrict editing of finalised opinions, per **BR-M4-01**.

ACCEPTANCE CRITERIA

1. **AC-M4-004.1** — Given a finalised opinion, when any user including the author attempts to edit a field, then the action is refused and the reason is stated.
2. **AC-M4-004.2** — Given a finalised opinion, when a user issues a superseding opinion, then the new record links to the original and the original displays as superseded while remaining fully retrievable.
3. **AC-M4-004.3** — Given a draft with no signed document attached, when the user attempts to finalise, then finalisation is refused.

10. Module 5 — Title Register (Property & Land Titles)

USER STORY

US-M5-01 — As the **Legal Services Department**, we want to maintain a register of land and property titles held by SINPF, so that ownership, encumbrances and legal risks are properly tracked.

DATA MODEL — ENTITY **TITLE**

FIELD	TYPE	REQUIRED	RULES AND NOTES
title_id	UUID	System	Primary key.
title_number	String(50)	Yes	Source field. Must be unique across the register. Primary search key.
location	String(200)	Yes	Source field. Property location or address. Searchable.
ownership_type	Enum	Yes	Source field. PERPETUAL_ESTATE FIXED_TERM_ESTATE LEASEHOLD_INTEREST OTHER . Values follow Solomon Islands land tenure and require confirmation (Q-17).
registered_owner	String(200)	No	Proposed — SINPF may hold titles through a subsidiary or trustee; the register should state the registered proprietor rather than assume it.
term_start / term_end	Date	Conditional	Required for FIXED_TERM_ESTATE . Proposed — a fixed-term estate expires, and that is a legal risk the register exists to track.
documents	File[]	—	Title documents and survey plans, per CC-DOC-01.

DATA MODEL — ENTITY **ENCUMBRANCE**

The source lists encumbrances as a field on the title. They are modelled as a child entity because a title can carry several, each with its own holder, dates and status, and each must be separately discharged.

FIELD	TYPE	REQUIRED	RULES AND NOTES
encumbrance_id	UUID	System	Primary key.
title_id	FK → Title	Yes	Owning title.
encumbrance_type	Enum	Yes	Source values: LEASE MORTGAGE CAVEAT EASEMENT OTHER .
holder_name	String(200)	Yes	The party holding the interest.
registered_date	Date	Yes	Date the interest was registered.

<code>expiry_date</code>	Date	No	Where the interest is time-limited.
<code>state</code>	Enum	Yes	<code>ACTIVE</code> <code>DISCHARGED</code> . Discharge requires a date and a supporting document.
<code>linked_contract_id</code>	FK → Contract	No	Where a lease encumbrance corresponds to a registered contract (FR-M5-004).

FUNCTIONAL REQUIREMENTS

FR-M5-001	Record title details	MUST
The system MUST allow recording of title details including title number, location and ownership type. ACCEPTANCE CRITERIA 1. AC-M5-001.1 — Given valid details, when the user saves, then the title is registered and appears in the register. 2. AC-M5-001.2 — Given a title number that already exists, when the user saves, then the record is rejected as a duplicate and the existing title is identified. 3. AC-M5-001.3 — Given ownership type <code>FIXED_TERM_ESTATE</code> with no term end date, when the user saves, then the record is rejected.		
FR-M5-002	Record encumbrances against a title	MUST
The system MUST allow recording of encumbrances such as leases, mortgages and caveats against a title, each with its holder, registration date and status, and MUST allow an encumbrance to be discharged. ACCEPTANCE CRITERIA 1. AC-M5-002.1 — Given a title with two active encumbrances, when it is viewed, then both are listed with type, holder, registered date and status. 2. AC-M5-002.2 — Given an encumbrance is discharged with a date and supporting document, when the title is viewed, then it shows as discharged and remains in the history rather than disappearing. 3. AC-M5-002.3 — Given a title with at least one active encumbrance, when the register is listed, then the title is marked as encumbered.		
FR-M5-003	Store title documents and survey plans	MUST
The system MUST store title documents and survey plans against the title record, per <code>CC-DOC-01</code> . ACCEPTANCE CRITERIA 1. AC-M5-003.1 — Given a title, when a survey plan is uploaded and classified, then it is listed against the title and is retrievable.		

FR-M5-004 Link titles to related contracts and disputes**MUST**

The system **MUST** allow a title to be linked to related contracts held in Module 2, and links **MUST** be navigable in both directions.

UNDEFINED TERM — DECISION REQUIRED

The source also requires titles to be linked to related **disputes**, but no dispute record is defined anywhere in the source document. Module 1 covers contribution and wages referrals only, which are not property disputes. Either a Disputes or Litigation module is missing from the requirements, or the intended link is to Module 1 referrals. This is **Q-18** and blocks the dispute half of this requirement.

ACCEPTANCE CRITERIA

1. **AC-M5-004.1** — Given a lease contract in Module 2, when it is linked to a title, then the title shows the contract and the contract shows the title, each opening the other.
2. **AC-M5-004.2** — Given a linked contract is terminated, when the title is viewed, then the link remains and reflects the contract's current status.

FR-M5-005 Search the title register**MUST**

The register **MUST** be searchable by title number and property location, per **CC-SRCH-01**, with filters for ownership type and encumbrance status.

ACCEPTANCE CRITERIA

1. **AC-M5-005.1** — Given a full or partial title number, when entered in search, then matching titles are returned.
2. **AC-M5-005.2** — Given the filter “has active encumbrance”, when applied, then only encumbered titles are returned.

11. Non-functional requirements

The source document contains no non-functional requirements. The items below are the minimum set implied by the stated business purpose — court-defensible evidence, external audit, and Board reporting. All are **Proposed** and require confirmation.

ID	AREA	REQUIREMENT
NFR-01	Retention	Referral records, documents and audit entries must be retained for the statutory limitation period applicable to SINPF Act claims, plus a margin, and must not be purgeable by any user role. The exact period is Q-19.
NFR-02	Availability	The system should be available during SINPF business hours, Monday to Friday. A target of 99.5% during business hours is proposed. Scheduled maintenance occurs outside business hours.
NFR-03	Backup and recovery	Daily backups of database and document storage, retained 30 days, with restoration tested at least twice yearly. Recovery point objective 24 hours; recovery time objective 8 business hours.
NFR-04	Authentication	Single sign-on against the existing SINPF directory, with multi-factor authentication for MLS and System Administrator roles. Session timeout after 30 minutes idle.
NFR-05	Transport and storage security	All traffic over TLS. Documents encrypted at rest. Document URLs must be non-guessable and access-checked on every request, not merely obscured.
NFR-06	Performance	Register list views return within 2 seconds for up to 50,000 records. Reports render within 10 seconds for a 12-month period; longer-running exports are generated asynchronously with notification on completion.
NFR-07	Localisation	Dates displayed as DD/MM/YYYY . Currency displayed as SBD with thousands separators and two decimal places. Times shown in Pacific/Guadalcanal.
NFR-08	Browser and device support	Current versions of Chrome, Edge and Firefox on desktop. Usable on tablet for read and document upload; full editing is not required on mobile.
NFR-09	Connectivity	The system must remain usable on constrained bandwidth: list views paginate, documents stream rather than preload, and uploads resume after interruption.
NFR-10	Data migration	Existing referrals, contracts, policies, opinions and titles held in spreadsheets or paper must be loadable through a bulk import with validation and an error report. Volumes are Q-20.

12. Assumptions and open questions

12.1 Assumptions applied in this document

Each assumption was necessary to make a stated requirement implementable. If an assumption is wrong, the requirements listed against it must be revised before build.

ID	ASSUMPTION	AFFECTS
A-01	Referrals are entered manually by LSD; there is no system-to-system feed from EMS in release 1.	FR-M1-001
A-02	MLS approves case closure, withdrawal and “not filed” decisions.	FR-M1-007, FR-M1-012
A-03	A Registry Clerk role exists, separate from Legal Officer, for data entry and filing.	Section 4
A-04	A System Administrator role maintains reference data and thresholds.	Section 4, all configurable values
A-05	Legal Officers can view all referrals but edit only their own.	CC-SEC-01
A-06	Reporting periods align to the calendar year until the financial year start is confirmed.	CC-RPT-01
A-07	Alerts are delivered by email and an in-application list; no SMS.	CC-NOT-01
A-08	All alert thresholds are administrator-configurable, not hard-coded.	All ALT-*
A-09	<code>PAID</code> and <code>WAGES_RECEIVED</code> are modelled as statuses, as the source lists them.	Section 6.4
A-10	Case activity means a status change, action, payment or document upload — not a page view.	ALT-M1-03
A-11	“Amounts involved in legal action” means claims at <code>COURT_PREP</code> or <code>IN_COURT</code> at period end.	RPT-M1-06
A-12	The insurance expiry warning window defaults to 60 days.	BR-M3-01, FR-M3-004

12.2 Open questions requiring a business decision

Questions marked **blocking** prevent the affected requirement from being built as specified.

ID	QUESTION	STATUS	BLOCKS
Q-01	Will referrals be received through an integration with the EMS system, or entered manually from the EMS referral letter?	Blocking	FR-M1-001
Q-02	Is the role set in Section 4 correct, and who holds each role?	Blocking	CC-SEC-01

Q-03	In which month does the SINPF financial year start?	Blocking	All reports
Q-04	Is SMS notification required for any alert, or is email sufficient?	Non-blocking	CC-NOT-01
Q-05	Is there an authoritative employer master file that the referral can look up, and what is the employer code format? Without it, employer name and code are free text and reporting by employer will be unreliable.	Blocking	FR-M1-001, FR-M1-002
Q-06	Can one referral carry unpaid contribution, unpaid surcharge and a wages-record default together, or is each a separate referral?	Blocking	Section 6.3, all M1 reports
Q-07	When a claim amount is corrected after a period has been reported, should previously issued reports be restated or frozen?	Blocking	BR-M1-03
Q-08	Should “prepared for prosecution” and “filed in court” be two statuses, as proposed, or remain one?	Blocking	Section 6.4
Q-09	Are “Contribution and Surcharge Paid” and “Wages Record Received” true statuses, or milestones that can both apply to one case?	Blocking	Section 6.4
Q-10	May a closed referral be reopened — for example when a deed of settlement defaults — and who may do it?	Non-blocking	FR-M1-013
Q-11	Should statute-barred status be calculated automatically from the period of default and a limitation period, or flagged manually? If automatic, what is the limitation period?	Non-blocking	FR-M1-017
Q-12	Do contracts need multiple named parties, or is a single counterparty sufficient?	Non-blocking	FR-M2-001
Q-13	Are any contracts denominated in a currency other than SBD?	Non-blocking	FR-M2-001
Q-14	Should contract status be derived from dates, as proposed, or set manually by a user?	Blocking	FR-M2-005
Q-15	Should contract expiry raise alerts, as insurance expiry does?	Non-blocking	FR-M2-006
Q-16	Should premium amounts be recorded against insurance policies for renewal budgeting?	Non-blocking	Section 8
Q-17	Are the proposed ownership types — perpetual estate, fixed-term estate, leasehold interest — the correct values for the title register?	Blocking	FR-M5-001
Q-18	What is a “dispute” in the title register requirement? No dispute record is defined anywhere in the source. Is a Disputes or Litigation module missing from scope?	Blocking	FR-M5-004
Q-19	What retention period applies to case records and documents?	Non-blocking	NFR-01
Q-20	What volume of existing records must be migrated into each register, and in what form do they exist today?	Non-blocking	NFR-10

Appendix A — De-duplication and consolidation log

This log records every change made to the source content, so that a reviewer holding the original document can verify that nothing was lost and can see exactly what was merged, split, corrected or added.

A.1 CONTENT MERGED

SOURCE CONTENT	ACTION TAKEN
Document upload requirement, repeated in all five modules	Consolidated into CC-DOC-01 to CC-DOC-04. Module-specific document types are the only part that varies, and are tabulated once under CC-DOC-02.
Search and filter requirement, repeated in four modules	Consolidated into CC-SRCH-01. Each module states only its own searchable fields and filters.
“Monthly / quarterly / biannually and annually”, repeated against six reports	Consolidated into the shared period selector CC-RPT-01. Report definitions no longer restate periods.
Narrative reasons 1 and 4 (complete record; monitor progress)	Merged in Section 6.1. Both describe tracking a referral from receipt to closure and generated the same requirements.
Narrative reason 5 (Executive and Board reporting) and functional requirement 6 (Reporting)	Merged into Section 6.7. Every measure named in the narrative maps to one of the six defined reports; see the note in that section.
“Outstanding amounts tied to legal referrals” and “Total outstanding”	Specified as one detail report (RPT-M1-02) and one summary report (RPT-M1-06) computed from a single formula, BR-M1-02.

A.2 CONFLICTS RESOLVED

CONFLICT IN SOURCE	RESOLUTION
Two different status lists: four values in the narrative column (Pending Review, Under Investigation, In Court, Closed) and ten in the requirements column.	The ten-value list is canonical. The four narrative terms are mapped to it in Section 6.4 so no source wording is lost.

“Prepared for Prosecution/Civil in Magistrate Court or High Court” conflates preparing to file with having filed.	Split into <code>COURT_PREP</code> and <code>IN_COURT</code> , because court-date alerting is only meaningful after filing. Raised as Q-08.
Case type given as a single value, while the same sentence describes contribution, surcharge and wages together.	Modelled as a multi-select with conditional amount fields. Raised as Q-06.
“Total amount of Contribution, Surcharges to be claimed including wages records” — one figure covering three things.	Split into <code>contribution_amount</code> and <code>surcharge_amount</code> , with <code>total_claimed</code> derived. A wages-record default carries no monetary claim and is counted separately.

A.3 GAPS CLOSED

GAP IN SOURCE	REQUIREMENT ADDED
The Acceptance Criteria column was empty for every row.	Acceptance criteria authored for all requirements, in Given/When/Then form.
High-risk employers are named as a business need in the narrative but have no corresponding requirement.	FR-M1-017 and the <code>risk_flags</code> field.
Alerts are required for court dates and response periods, but no field holds either date.	<code>next_court_date</code> , <code>response_due_date</code> , <code>court_venue</code> , <code>court_case_number</code> , <code>date_filed</code> .
A “Total paid” report is required, but no payment is ever recorded.	<code>ReferralPayment</code> entity and FR-M1-010.
The system must track “actions taken”, but only a status field is defined.	<code>ReferralAction</code> entity and FR-M1-009.
“Case outcomes” must be reported, but no outcome values are defined.	<code>outcome</code> enumeration in Section 6.3.

No roles, permissions, audit, retention, security or performance requirements.	Section 4, CC–AUD–01, CC–SEC–01, Section 11.
Titles must link to “disputes”, but no dispute record exists in the source.	Flagged as Q–18; not invented.

A.4 EDITORIAL CORRECTIONS

The following source wording was corrected. Meaning was not changed; where a correction could have altered meaning, the item was raised as a question instead.

SOURCE	CORRECTED TO	NOTE
“The system sto display contract status”	“display contract status”	Typographical.
“referrals can be, incomplete, delayed and in accurate reporting”	“referrals are incomplete, delayed and inaccurately reported”	Grammar; meaning preserved.
“escalated too Legal”	“escalated to Legal”	Typographical.
“prosecution/debt recovery outcome outcomes”	“prosecution or debt-recovery outcomes”	Duplicated word removed.
“4. Title Register (Property & Land Titles”	“Title Register (Property & Land Titles)”	Unclosed parenthesis.
Mixed use of “The system shall” and “The system to”	“MUST” / “SHOULD” per Section 1.2	Normalised so that obligation level is unambiguous.
Inconsistent numbering: register modules numbered 2 and 4 only; requirement lists restarting at 1 in each column	Continuous module numbering and stable requirement identifiers	See Section 1.1.

Appendix B — Source traceability matrix

Every item in the source document maps to at least one requirement in this specification. Reviewers should use this table to confirm that nothing was dropped during restructuring.

SOURCE LOCATION	SOURCE ITEM	REQUIREMENT IN THIS DOCUMENT
T1 · narrative 1	Complete and accurate record of all referrals; LSD responsibilities on receipt	Section 6.1; FR-M1-001, FR-M1-006
T1 · narrative 2	Evidence and audit trails; dates of default; correspondence records	CC-AUD-01, CC-DOC-04, FR-M1-003, FR-M1-008
T1 · narrative 3	Volume of referrals; high-risk employers; urgent and overdue matters; officer assignment	FR-M1-004, FR-M1-015, FR-M1-017, RPT-M1-01, RPT-M1-03
T1 · narrative 4	Follow-up, demand letters, affidavits, filing, closure; no case goes cold	FR-M1-009, FR-M1-012, ALT-M1-03
T1 · narrative 5	Executive and Board reporting; cases referred; values escalated; amounts in legal action; prosecution outcomes	RPT-M1-01, RPT-M1-04, RPT-M1-06, A-11
T1 · narrative	Reports to MLS, GM, ARMC; information to External Auditors	CC-RPT-02, CC-AUD-01, External Auditor role in Section 4
T1 · FR 1	Referral record creation with employer name, employer code, referral date, case type, total amount	FR-M1-001, Section 6.3
T1 · FR 2	Case assignment to a Legal Officer	FR-M1-004, FR-M1-005
T1 · FR 3	Status tracking through ten stages	Section 6.4, FR-M1-006, FR-M1-007, FR-M1-011, FR-M1-012
T1 · FR 4	Documents and evidence management	CC-DOC-01-CC-DOC-04, FR-M1-008

T1 · FR 5	Alerts: new referrals, approaching deadlines, inactivity beyond 30 days	ALT-M1-01, ALT-M1-02, ALT-M1-03, CC-NOT-01
T1 · FR 6	Six reports across four period types	RPT-M1-01-RPT-M1-06, CC-RPT-01, CC-RPT-02
T2 · row 1	Contracts: registration, document upload, categorisation, search, status display	FR-M2-001-FR-M2-005
T2 · row 2	Insurance: registration, coverage period, documents, type filter, expiry flagging	FR-M3-001-FR-M3-004
T2 · row 3	Legal opinions: entry, author and date, document upload, keyword search, editing restriction	FR-M4-001-FR-M4-004, BR-M4-01
T2 · row 4	Titles: title details, encumbrances, documents and survey plans, links to contracts and disputes, search	FR-M5-001-FR-M5-005, Q-18

Review checklist for the Legal Services Department. To move this specification to approved status: confirm or correct the twelve assumptions in Section 12.1; answer the nine blocking questions in Section 12.2; confirm that the eleven referral statuses and their permitted transitions in Section 6.4 match how cases actually move; and confirm the six report definitions in Section 6.7, particularly the governing date chosen for each. Development of Modules 2 to 5 can begin ahead of the Module 1 decisions, as their open questions are largely non-blocking.
